

For world champions and those who are simply the best in the world

Appetitt

Enriched by Norwegian nature

Healthy nutrition yields long-lasting health benefits, and a good diet is essential for a long and healthy dog life. Appetitt offers a wide range of dog foods, perfectly adapted to the needs of your dog.

Appetitt is made mainly of highquality Norwegian ingredients, enriched by Norwegian nature!

The Appetitt brand is a result of long experience in feed production, research, and product development with basis in international norms and recommendations. Our large network of veterinarians, breeders, and research institutions contribute with expertise and insight. All so that we can develop and produce the very best food for your dog!

Appetitt is produced in Norway in Vaksdal, just outside Bergen.

In Norway, we have strict quality requirements for ingredients used in food intended for human or animal consumption. We have zero tolerance for salmonella and the use of genetically modified ingredients.

Very good health status of livestock and the restrictive use of antibiotics in Norwegian animal husbandry mean that the incidence of antibiotic resistant bacteria in feed ingredients is virtually non-existent.

Good digestion depends on a properly formulated dog food!

In all animals, the purpose of the digestive system is to break down large complex nutrients into simple, small compounds that can be absorbed into the body, transported to the various tissues, and used by the cells. Originally – or before dogs became our pets – a dog's diet consisted of prey made up mainly of proteins and fats. The intestines of the prey were also eaten, and dogs are thus to some extent adapted to the digestion of carbohydrates. However, a dog's digestive tract is short and dogs should therefore consume concentrated food with readily available nutrients, i.e., "high digestibility", thereby ensuring that their nutritional needs are met.

When dog food is digested, fats in the food are broken down into glycerol, fatty acids and some mono- and di-glycerides, which are then absorbed through the intestinal wall. Complex carbohydrates are split into simple sugars such as glucose, fructose and galactose. Proteins are broken down ("hydrolysed") into amino acids and some short peptides. The quality of the proteins is primarily determined by the content of essential amino acids and how digestible or accessible these are for the dog. It does not matter how high-protein a dog food is if the amino acid composition is not properly balanced. When the protein has "high biological value", the amino acid composition is correct and the protein is highly digestible. Appetitt covers all these bases!

Hydrolysed protein

Hydrolysed protein is protein that is broken down into smaller pieces and consists of both free amino acids and shorter peptides. This means that the

protein has high digestibility and thus highly available to be metabolised in the body.

When protein is hydrolysed, it consists of shorter fragments than a protein that is not hydrolysed.

A shorter protein fragment can more easily "evade" the immune system, an attribute that can be beneficial if a dog is sensitive or has allergies.

Norwegian fish oil

Norwegian fish oil contributes the vital omega-3 fatty acids EPA and DHA.

Beta-glucans

A natural product from yeast cell walls. Beta-glucans support your dog's immune system and contribute to good health. Beta-glucans are

especially important for dogs who are under stress or have impaired immune systems, such as during weaning or aging, or during extensive training or hunting.

FOS

Fructo-oligosaccharides (FOS) digested by bacteria in the small and large intestine can promote the growth and establishment of good

bacteria and microbes in the digestive tract.

MOS

Mannan-oligosaccharides (MOS) might help reduce the risk of the establishment of unwanted bacteria in the intestine.

Antarctic krill

Krill contribute with top-quality, highly digestible protein and are also an excellent and effective source of omega-3. The content of the

essential omega-3 fatty acids EPA and DHA in krill is very high compared to other available marine ingredients. In addition, the omega-3 fatty acids in krill are water-soluble - and are thus absorbed faster and more efficiently in the body than those from traditional omega-3 sources such as fish oil. In addition, krill contain natural glucosamine, a functional substance that can have a positive effect on the bone and joint health of animals.

The krill meal in Appetitt comes from sustainable fishery and is certified by the Marine Stewardship Council (MSC) as sustainable and 100% traceable. MSC requirements meet global best practice guidelines for certification and ecolabelling programmes.

Glucosamine and chondroitin

Glucosamine and chondroitin are found in cartilage and connective tissue such as joints. They are crucial for building cartilage tissue,

retaining moisture and preventing breakdown. Joint disorders and joint pain might be prevented naturally by ensuring adequate consumption of glucosamine and chondroitin through the ingredients in dog food.

Carnitine

Carnitine is an amino acid that functions in the conversion of fatty acids into usable energy in the cells. Carnitine boosts the metabolism

of fat. Furthermore, carnitine might increase energy production and be beneficial for dogs' during performance.

Natural antioxidants

The natural antioxidants in Appetitt are vitamin E and astaxhanthin from Norwegian salmon and krill. Appetitt also uses a natural antioxidant source

in the form of rosemary.

Collagen

Collagen is protein and makes up about 30% of all protein in a dog's body. Appetitt is rich in hydrolysed collagen from chicken and salmon in the form of free amino acids and peptides. Collagen might contribute to the good and healthy development of articular cartilage, tendons, blood vessels, skin, muscles and many other connective tissue structures in the body.

Rosemary

A natural antioxidant in the dog food.

Other things worth knowing about Appetitt dog food

Gluten-free recipe

Appetitt follows a gluten-free recipe and the food is grain free apart from rice.

Some general feeding advice:

Choose a dog food with nutritional content based on your dog's age, size, life stage and activity level.

Dry food can be served dry or soaked in water for about 20 minutes.

Adjust the daily ration according to your dog's activity level and physique. When reading the recommended food rations on the bag, it is important to remember that the amount of food can vary by +/- 20% depending on your dog's activity level. Feel free to divide the daily ration between several feedings per day.

Dogs should always have free access to fresh drinking water.

Keep your dog food dry and preferably slightly cool. A closed container with a lid will help keep the food fresh and tasty for longer.

Remember good hygiene! Wash the dog food bowl between each meal.

High-quality treats and snacks should be given only as a reward, and in limited quantities.

Never give a dog chocolate, sweets, onions or grapes.

Appetitt Enriched by Norwegian nature

Adapted to your dog's size

When your dog reaches its adult weight, we can say that it is a small, medium or large dog. This corresponds to adult weights of up to 10 kilogrammes, between 10 and 25 kilogrammes, and over 25 kilogrammes, respectively. In addition to having different growth rates, small breeds have faster metabolic processes than large breeds. Small breeds therefore require more energy and nutrients per kilogramme of body weight. For large breeds, on the other hand, we must ensure that the puppy does not grow too quickly, so that the development of bones and joints takes place at the right speed.

The ideal supply of energy and protein is therefore lower for large dogs than for smaller dogs, because it prolongs the growth period. Together with the proper supply and ratio of calcium and phosphorus, this ensures the beneficial growth and development of a dog's muscles and skeleton. Puppy food is recommended until a puppy has reached about 90-100 percent of its adult size. For large breeds, this corresponds to about 16-18 months of age. Small breeds reach this size at 10 to 12 months of age.

PUPPY SMALL BREED

Complete diet for small breed puppies with an adult weight of up to 10 kg

Appetitt Puppy Small Breed is formulated for small breed puppies. The food contains highly digestible proteins of animal and marine origin that are essential for your puppy's growth and development. With the exception of rice, the food is grain free and high in hydrolysed proteins. Thus, the food is low in ingredients that can lead to intolerance and allergies.

The food contains natural antioxidants such as vitamin E and rosemary and with natural glucosamine and chondroitin from marine and animal sources for joint and bone health. Appetitt Puppy also contains Antarctic krill, providing your dog with the vital omega-3 fatty acids, EPA and DHA in the form of phospholipids. The food contains natural antioxidants such as vitamin E and rosemary and with natural glucosamine and chondroitin from marine and animal sources for joint and bone health.

Fructo-oligosaccharides (FOS) from beet fibre for your puppy's gastrointestinal health and beta-glucans for your puppy's overall health.

Feeding guidelines: The table shows daily food amounts in grammes per day, listed according to your puppy's weight and age.

Meet two of our ambassadors!

The siblings Yvette and Yngve Hoel grew up in Hadeland, Norway and have been dog sledding all their lives. In total, they have five dogs that are a mix of German pointer, English pointer and greyhound breeds. The siblings compete in

Nordic-style races and bare ground races and have been world champions for many years. In total, they have 72 medals from the World Championships and European Championships, including 17 World Championship gold medals.

The right food is essential for dogs to function optimally both in everyday life and in a competitive context.

Our dogs get Appetitt both as a regular meal and as a nutrient replenishment in connection with exercise.

The dogs love it - and the food disappears in record time!"

EXTREME

Complete diet for highly active adult dogs

Appetitt Extreme is formulated for highly active dogs with high calorie needs. High content of fats, prebiotic substances and easily digestible proteins of animal and marine origin to help your dog achieve peak performance during high-energy events such as strenuous training and hunting. Combined with carnitine, the high fat content stimulates increased fatty acid burning.

With the exception of rice, the food is grain free and high in hydrolysed proteins. Thus, the food is low in ingredients that can lead to intolerance and allergies. LIGHT

Complete diet for adult dogs that gain weight easily or suffer from obesity

Appetitt Light is formulated for dogs that are overweight or prone to weight gain. The food has a moderate fat content and the carefully adapted level of dietary fibre makes it easier to control your dog's calorie intake. Appetitt Light contains carnitine, which might have a positive effect on energy and fat metabolism. Psyllium husk from psyllium seeds is high in fermentable and water-soluble fibres and

might contribute to good gastrointestinal function.

Psyllium has very good water-binding ability

contribute to increased satiety.

and other swelling properties. It might thus also

With the exception of rice, the food is grain free and high in hydrolysed proteins. Thus, the food is low in ingredients that can lead to intolerance and allergies. With natural antioxidants such as vitamin E and rosemary and with natural glucosamine and chondroitin from salmon and chicken for joint and bone health. Antarctic krill supports your dog's skin, coat and joints with the essential omega-3 fatty acids, EPA and DHA in the form of phospholipids. Fructo-oligosaccharides (FOS) and mannanoligosaccharides (MOS) for digestion and betaglucans from yeast for the overall health of your dog.

Feeding guidelines: The table shows daily food amounts in grammes per day, listed according to your dog's weight and activity level.

SENIOR

Complete diet for senior dogs older than 7 years

Appetitt Senior is formulated and balanced to meet the needs of senior dogs. The ageing process in dogs varies and the transition to a senior food must be assessed individually for each dog. The food has a moderate protein content.

Carnitine contributes to energy and fat metabolism and may reduce the risk of obesity. Psyllium husk from psyllium seeds is high in fermentable and water-soluble fibres and might contribute to good gastrointestinal function. Psyllium has very good water-binding ability and other swelling properties. It might thus also contribute to increased satiety.

Except for rice, the food is grain free and high in hydrolysed proteins. Thus, the food is low in ingredients that can lead to intolerance and allergies. With natural antioxidants such as vitamin E and rosemary and with natural glucosamine and chondroitin from salmon and chicken for joint and bone health. Antarctic krill supports your dog's skin, coat and joints with the essential omega-3 fatty acids, EPA and DHA in the form of phospholipids. Fructo-oligosaccharides (FOS) and mannan-oligosaccharides (MOS) for digestion and beta-glucans from yeast for the overall health of your dog.

Feeding guidelines: The table shows daily food amounts in grammes per day, listed according to your dog's weight and activity level.

Appetitt Lunch Paté (150 g)

Complete dog food. Appetitt Lunch is a very tasty wet dog food with a relatively high protein-to-fat ratio. It can be used as a complete food or in combination with dry food for dogs that need extra protein. The food is very tasty and works well as an appetite enhancer. Appetitt Lunch can be fed to dogs with a normal activity level according to the following recommendations.

Appetitt Freeze-dried rumen

Freeze-dried rumen from Norwegian cattle has very good palatability and a high calorie content. Ideal as a food supplement for dogs maintaining a high activity level, such as during training, hunting and running. Allow the food to swell for 20 minutes before giving it to the dog. Freeze-dried rumen is not a complete dog food and should not exceed 50 % of your dog's daily ration (based on weight) over time.

Appetitt Energy Paté (150 g)

Appetitt Energy is a very tasty supplementary food that can replace up to 20 % of daily dog food intake (based on weight). Appetitt Energy is a supplementary food for dogs and should not be your dog's only source of nutrition. Its use is recommended in combination with high-calorie dry food for dogs that need extra energy, e.g., during hunting or in extensive training periods. This wet dog food can also be used for dogs that need to gain weight. Serve at room temperature.

Appetitt stockfish

Appetitt stockfish is made from 100 % Norwegian saithe. Stockfish is a natural source of omega-3 and can be used as a reward or snack, for example after training or on walks in the woods. Stockfish should not be given to dogs that devour their food without chewing.

26 Appetitt Enriched by Norwegian nature ration (based on weight) over time. appetitt.com 27

Appetitt wetfood for dogs

Appetitt sausages for dogs are made from Swedish ingredients, 100% animal protein and contains no grain raw materials.

Contains no artificial preservatives, flavorings or colourings.

Appetitt Puppy (800 g)

Complete diet for puppies that meet the nutritional needs of puppies up to 1 year of age. Appetitt Puppy sausage has a balanced vitamin and mineral content suitable for use as a complete diet, but the feed can also be used in combination with dry food. Contains animal products 82% (chicken, pork and beef), potato, carrot, pea fibre, vitamins and minerals.

Body weight/kg	1-4 months Gram/day	4-12 months Gram/day
1-3	145-330	97-220
3-5	330-480	220-320
5-8	480-690	320-460

10-15	815-1100	540-740
15-20	1100-1620	740-1080

Appetitt Maintenance with fish and potato (800 g)

Complet diet for adult dogs. Appetitt Maintenance Fish & Potato has an energy and nutritional content that meets the requirements of adult dogs from 1 year of age and with a normal level of activity. Contains animal and marine products 76% (36 % Fish (cod, salmon), pork, pork liver, chicken, beef), water, potato, carrot, pea fiber, vitamins and minerals.

Body weight/kg	Gram/day Low-Normal activity
5	220-250
10	370-430
15	500-580
20	620-720
30	840-970
40	1050-1200

Feeding guide: The feeding guide gives the average amount of daily feed related to body weight. The feed amount may vary +/- 20 % depending on activity level. Your dog should always have access to fresh drinking water.

Appetitt Maintenance with chicken and potato (800 g)

Complete diet for adult dogs. Appetitt Maintenance Chicken & Potato has an energy and nutritional content that meets the requirements of adult dogs from 1 year of age and with a normal level of activity. Contains 76% animal products (chicken 48%, pork liver, pork, beef), water, potato, carrot, pea fiber, vitamins and minerals.

Body weight/kg	Gram/day Low-Normal activity
5	220-250
10	370-430
15	500-580
20	620-720
30	840-970
40	1050-1200

Appetitt Light (800 g)

Complete diet for adult dogs from 1 year of age. Appetitt Light is suitable for dogs that are overweight or easily gain weight. The feed has a moderate fat content. Contains 56% animal products (chicken, turkey, pork liver, beef), carrot, potato, water, pea fiber, vitamins and minerals.

Body weight/kg	Gram/day Low-Normal activity
5	240-280
10	410-480
15	550-650
20	680-800
30	920-1100
40	1150-1350

Appetitt Energy Sport (800 g)

Complete food for adult dogs from 1 year of age. Appetitt Energy Sport is suitable for active adult dogs. The feed has a high energy content and can be used both as complete feed or as supplementary feeding/snack during high activity. Contains 81% animal and marine products (chicken, salmon, pork, pork liver, beef), water, potato, pea fiber, carrot, vitamins and minerals
